

Menardi FF-DC

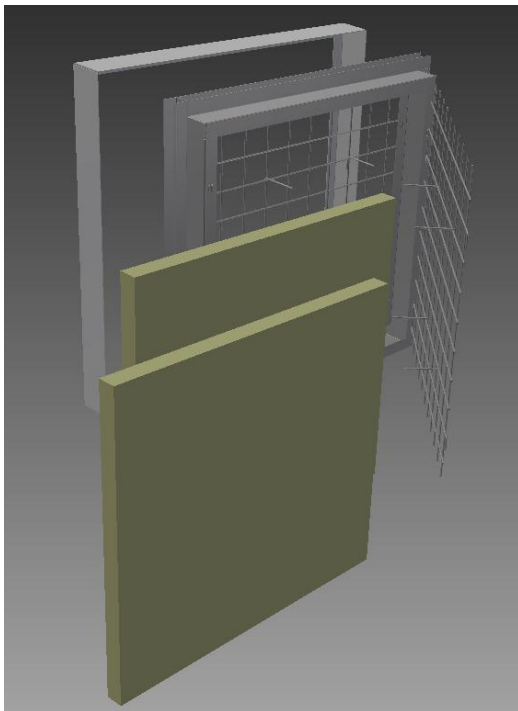

filter frame with filter service door and drainage system

FF-DC

Menardi FF-DC is a filter frame special designed for installation of coalescing filters for water and dust separation. The filter frame is designed to fit in standard sized bag/compact filter frame Menardi FF-B. The frame have a drainage system to handle extreme amounts of collected water in offshore and marine environments.

Filter service can be done from dirty or clean air side depending on the installation requirements.

Filter support hooks is standard on all sizes due to extreme dust and/or water loading.

- Simple to install.
- Excellent drainage properties for extreme water loads.
- Filter access from both dirty and clean air side.
- Available in 2 depths for single or double filters.
- Can be supplied in galvanized steel, stainless AISI 304 and AISI 316L.
- Filter supporting hooks is standard on all frame sizes.
